CITY CARE HOSPITAL

HEALTHCARE WEBSITE PROJECT REPORT & DOCUMENTATION

Project Name	City Care Hospital Web Portal
Technology	HTML5 and CSS3
Project Type	Front-End Healthcare Information Website
Purpose	Educational web development project presenting departments, doctors, visiting hours, and appointment booking

Prepared as a simple-English guide to the project, its design, code structure, and visible browser output.

1. Introduction

City Care Hospital is a responsive front-end medical website designed to provide patients and visitors with essential healthcare information. It presents hospital departments, specialist doctors, medical specialities, visiting hours, emergency contact details, and an interactive appointment booking form. The website uses semantic HTML5 for content organisation and CSS3 to control teal-themed aesthetics, responsive layouts, and card-based styling.

2. Project Objectives

- Create a welcoming and professional homepage for a medical care facility.
- Display medical departments (Cardiology, Neurology, Orthopedics, Pediatrics) with short descriptions.
- List specialist doctors and their respective medical designations.
- Present hospital specialities and an emergency contact directory.
- Provide a clear visiting hours timetable and an interactive appointment booking form.

3. Technologies Used

HTML5: Defines the structural layout, including the header, navigation bar, department cards, doctor profiles, specialities list, visiting hours table, emergency section, appointment form, and footer.

CSS3: Customises styling with a medical teal color palette (`teal` and `#164e63`), card backgrounds (`#e0f2f1`), border radius, padding, and responsive media queries.

JavaScript (Inline): Handles the appointment form submission alert and validation feedback.

4. Website Sections Breakdown

Header and Navigation

The teal header displays the hospital title and tagline (`Your Health Is Our Priority`). Below it, a dark cyan navigation bar provides anchor links to Home, Departments, Doctors, Visiting Hours, and Appointment sections.

Departments & Doctors

The departments section highlights key medical fields. The doctors section introduces specialist physicians such as Dr. Rahul (Cardiologist), Dr. Priya (Neurologist), and Dr. Arjun (Orthopedic Specialist) inside styled cards.

Specialities & Emergency Contacts

Highlights core medical offerings such as Emergency Care, Advanced Scanning, Intensive Care Unit, and Health Checkups. The emergency section lists contact numbers, ambulance desk info, and helpline 112.

Visiting Hours & Appointment Form

A structured timetable outlines OPD timings from Monday to Sunday. The appointment form collects patient name, email, phone number (10-digit validation), department selection, appointment date, and reason for visit.

5. Important CSS & HTML Concepts

Responsive Design: Media query rules (`max-width: 600px`) stack navigation links vertically and adjust section margins on mobile devices.

Form Validation: HTML5 attributes like `required` and `pattern="[0-9]{10}"` ensure data integrity before submission.

6. Website Output Screenshot

The following screenshot represents the visual browser output of City Care Hospital's website, showing the header, navigation, departments, doctors, schedule table, and appointment form.

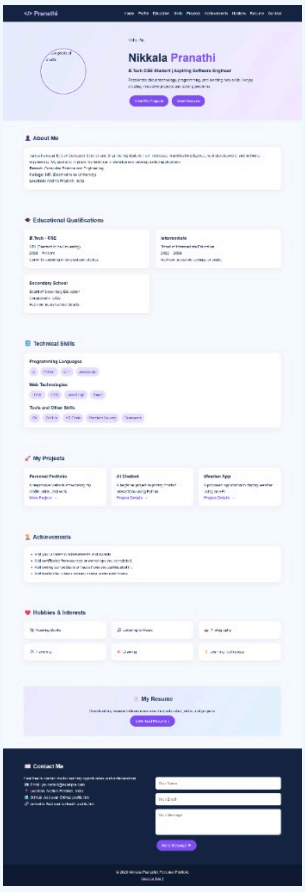

Figure 1. City Care Hospital webpage rendered browser output.

7. How the Website Works

- The browser reads the HTML5 structure and loads embedded CSS styles for teal themes and card padding.
- Anchor links in the navigation bar allow smooth scrolling to specific sections on the page.
- The appointment form uses inline JavaScript validation and an alert box to confirm booking requests.
- Responsive media queries stack navigation links on smaller smartphone viewports.

8. Observations and Future Enhancements

- The appointment form currently displays a JavaScript alert and can be integrated with a backend database system.
- Emergency and contact details are placeholder educational examples and should be verified before deployment.
- Future versions can include online doctor consultation booking and patient health record portals.

9. Conclusion

City Care Hospital demonstrates how HTML5 and CSS3 can create a clean, accessible medical information portal. It successfully communicates departmental services, doctor profiles, schedules, and appointment booking.

10. Quick Viva Questions & Answers

Q: What is the main purpose of this project?
A: To present hospital services, medical departments, doctor profiles, visiting hours, and an appointment booking form.

Q: Which technologies are used to build this website?
A: HTML5 for document structure and CSS3 for styling and responsive mobile layout.

Q: How is form input validated in the appointment section?
A: Using HTML5 validation attributes like `required` and `pattern="[0-9]{10}"` for phone numbers.

Q: What color scheme is predominantly used?
A: A professional medical teal and dark cyan palette (`teal` and `#164e63`).

Q: Does the appointment form connect to a live hospital server?
A: No, it is a front-end educational demonstration form using JavaScript alerts.

Appendix A. Source Code (HTML & CSS Part 1)

The snippet below details the HTML head setup, global body styling, teal header, and navigation bar styles.

```
<!DOCTYPE html> <html> <head> <title>City Care Hospital</title> <style> body { font-family: Arial; margin: 0; background-color: #f0f8ff; } header { background-color: teal; color: white; text-align: center; padding: 20px; } nav { background-color: #164e63; padding: 15px; text-align: center; } nav a { color: white; text-decoration: none; margin: 10px; } section { padding: 20px; margin: 15px; background-color: white; border-radius: 8px; } h2 { color: teal; } </style> </head>
```

Appendix A. Source Code (CSS Part 2)

The snippet below shows card styling, form inputs, buttons, and mobile media queries.

```
<style> .card { background-color: #e0f2f1; padding: 15px; margin: 10px; border-radius: 8px; } input, select, textarea { width: 90%; padding: 10px; margin: 8px; } button { background-color: teal; color: white; padding: 12px; border: none; cursor: pointer; } footer { background-color: #164e63; color: white; text-align: center; padding: 15px; } @media (max-width: 600px) { nav a { display: block; margin: 10px; } section { margin: 8px; } } </style>
```

Appendix A. Source Code (HTML Body Part)

```
<body> <header> <h1>City Care Hospital</h1> <p>Your Health Is Our Priority</p> </header> <nav> <a href="#home">Home</a> <a href="#departments">Departments</a> <a href="#doctors">Doctors</a> <a href="#hours">Visiting Hours</a> <a href="#appointment">Appointment</a> </nav> <section id="home"> <h2>Welcome to City Care Hospital</h2> <p>We provide quality healthcare and medical services.</p> </section> <section id="appointment"> <h2>Book an Appointment</h2> <form onsubmit="alert('Appointment Submitted!'); return false;"> <label>Patient Name:</label><br> <input type="text" required placeholder="Enter name"><br> <button type="submit">Submit</button> </form> </section> <footer> <p>© 2026 City Care Hospital</p> </footer> </body> </html>
```
