NIKKALA PRANATHI

WEB DEVELOPMENT PROJECT REPORT | PORTFOLIO WEBSITE

Project Name	Nikkala Pranathi Personal Portfolio
Technology	HTML5 and CSS3
Project Type	Front-end / Static Personal Web Application
Purpose	Academic portfolio showcasing skills, projects, and educational background

Prepared as a simple-English guide to the project, its design, code structure, and browser output.

1. Introduction

Nikkala Pranathi Portfolio is a modern, responsive personal website that presents profile details, educational qualifications, technical skills, projects, achievements, hobbies, resume download, and contact information. It is designed to look welcoming, professional, and easy to navigate. The website uses HTML5 to organise the content and CSS3 to control colours, layout, spacing, animations, and responsive behaviour.

2. Project Objectives

- Create a clear, professional homepage for an aspiring software engineer.
- Display educational milestones and academic background in structured cards.
- Highlight technical skills in programming languages, web technologies, and developer tools.
- Present personal projects, achievements, and hobbies in an engaging visual grid.
- Provide contact details, interactive inquiry form, and resume download links.
- Practise HTML5 semantic page structure and modern CSS3 layout techniques.

3. Technologies Used

HTML5: Creates the structure of the website, including the sticky header, navigation menu, hero banner, profile section, education cards, skill badges, project grid, achievements list, hobbies grid, contact form, and footer.

CSS3: Adds custom styling, colour palettes, typography, rounded corners, soft box shadows, smooth hover micro-interactions, CSS grid layouts, CSS keyframe animations, and mobile-friendly responsive media queries.

JavaScript: Handles interactive elements such as toggling the mobile navigation menu and showing form submission feedback messages.

4. Website Sections Breakdown

Header and Navigation

The dark-navy header (`#172642`) contains Pranathi's branding logo (`</> Pranathi`), a mobile menu toggle button, and links to Home, Profile, Education, Skills, Projects, Achievements, Hobbies, Resume, and Contact. The header stays sticky at the top while scrolling.

Hero Section

The opening banner features an animated circular profile picture placeholder with a glowing border, accompanied by introductory headings, professional title (`B.Tech CSE Student | Aspiring Software Engineer`), and action buttons for viewing projects and downloading the resume.

Profile & Educational Qualifications

The About Me section outlines branch, university (NRI Deemed to be University), and location details. The education section presents B.Tech CSE, Intermediate, and Secondary School qualifications in a two-column card layout.

Technical Skills & Projects

Technical skills are grouped into Programming Languages (C, Python, C++, JavaScript), Web Technologies (HTML, CSS, JavaScript, React), and Tools & Other Skills (Git, GitHub, VS Code, Problem Solving, Teamwork) styled as pill badges. The Projects section showcases a Personal Portfolio, AI Chatbot, and Weather App inside interactive cards.

Achievements, Hobbies & Resume

The Achievements section features an unordered list for academic awards, certificates, and coding hackathons. Hobbies are displayed in a 6-card grid covering reading, music, photography, travelling, drawing, and learning technology. A dedicated resume box provides quick download access.

Contact Section and Footer

The dark contact panel includes email, location, GitHub and LinkedIn placeholders alongside an interactive contact form with name, email, and message inputs. The footer displays copyright information and a smooth-scrolling "Back to Top" link.

5. Important CSS & HTML Concepts

CSS Grid & Flexbox: Used extensively for aligning navigation items, hero elements, project grids, and two-column contact forms.

Keyframe Animations: Implements `@keyframes fadeUp` and `@keyframes float` to create smooth entrance animations and floating profile picture effects.

6. Website Output Screenshot

The following screenshot represents the visual browser output of Nikkala Pranathi's personal portfolio website, showing the sticky header, hero section, profile card, skills badges, projects, and contact form.

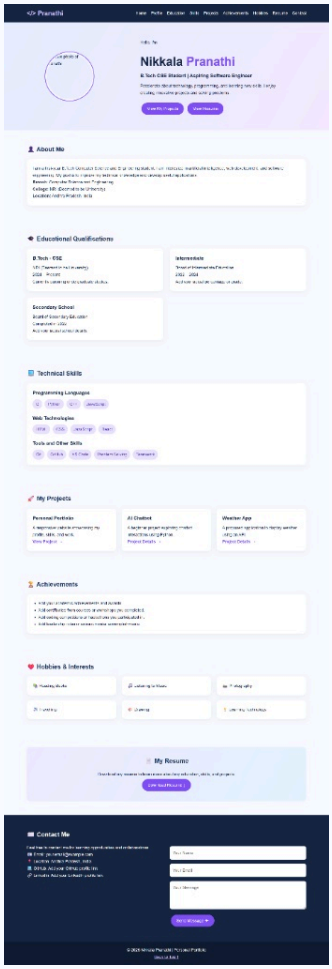

Figure 1. Nikkala Pranathi Portfolio website rendered browser output.

7. How the Website Works

- The browser reads the HTML5 markup and builds the Document Object Model (DOM).
- The embedded CSS stylesheet applies colors, typography, layout structures, shadows, and responsive rules.
- Navigation anchor links use element IDs to enable smooth scrolling when clicked.
- CSS Grid and Flexbox automatically adjust element placement across desktop and mobile viewports.
- JavaScript event listeners toggle the mobile menu and handle contact form submission feedback.

8. Observations and Future Enhancements

- Contact links and social profiles currently contain placeholder text and should be updated with actual URLs before publication.
- The contact form currently shows a static demo message and can be connected to a backend email service (such as EmailJS or Formspree).
- Future versions can include live project hosting links, dark/light mode theme toggling, and blog integration.

9. Conclusion

Nikkala Pranathi's portfolio website demonstrates effective front-end development skills using HTML5, CSS3, and JavaScript. It provides a clean, professional, and responsive digital identity suitable for showcasing academic achievements and software engineering projects.

10. Quick Viva Questions & Answers

Q: What is the main purpose of this project?
A: To create a professional portfolio showcasing Nikkala Pranathi's education, skills, projects, and contact channels.

Q: Which technologies were used to build this website?
A: HTML5 for structure, CSS3 for styling and responsive design, and JavaScript for mobile menu toggling and form interaction.

Q: How does smooth scrolling work in the navigation?
A: The CSS property `scroll-behavior: smooth;` combined with anchor href links targeting section IDs.

Q: What is the function of CSS media queries in this project?
A: They adapt the layout for smaller screen sizes (such as mobile devices) by reorganizing grid columns and navigation menus.

Q: Is the contact form currently connected to a database?
A: No, it is a front-end demo form providing simulated feedback when submitted.

Appendix A. Source Code (HTML & CSS Part 1)

The snippet below shows the HTML document setup, meta tags, and core global CSS styles for sticky headers and reset rules.

```
<!DOCTYPE html> <html lang="en"> <head> <meta charset="UTF-8"> <meta name="viewport" content="width=device-width, initial-scale=1.0"> <title>Nikkala Pranathi | Portfolio</title> <style> /* ========== 1. GLOBAL RESET & BASE STYLES ========== */ * { margin: 0; padding: 0; box-sizing: border-box; scroll-behavior: smooth; } body { font-family: Arial, sans-serif; color: #19294b; background: #f8faff; line-height: 1.7; } /* ========== 2. STICKY HEADER & NAVIGATION ========== */ header { background: #172642; color: white; padding: 15px 7%; display: flex; justify-content: space-between; align-items: center; position: sticky; top: 0; z-index: 100; } .logo { font-size: 25px; font-weight: bold; color: #d9c5ff; } nav { display: flex; gap: 18px; } nav a { color: white; text-decoration: none; transition: color 0.3s, transform 0.3s; } nav a:hover { color: #c9a7ff; transform: translateY(-3px); } </style> </head>
```

Appendix A. Source Code (CSS Part 2)

The snippet below details the hero section layout, responsive grid cards, skill pills, and mobile media queries.

```
      <style> /* ========================================== 3. HERO SECTION & PROFILE PIC ANIMATION
========================================== */ .hero { min-height: 350px; display: flex; align-items: center;
justify-content: space-around; gap: 35px; flex-wrap: wrap; background: linear-gradient(120deg, #e5efff, #f5eaff); }
.profile-pic { width: 190px; height: 190px; border-radius: 50%; border: 5px solid white; outline: 3px solid
#9560ff; object-fit: cover; animation: float 3s ease-in-out infinite; } @keyframes float { 0%, 100% { transform:
translateY(0); } 50% { transform: translateY(-10px); } } /* ========================================== 4. CARDS,
GRIDS & SKILL PILLS ========================================== */ .card { background: white; padding: 23px; border-
radius: 14px; box-shadow: 0 5px 20px #17264210; transition: transform 0.3s, box-shadow 0.3s; } .grid { display:
grid; grid-template-columns: repeat(3, minmax(0, 1fr)); gap: 20px; } .skills { display: flex; flex-wrap: wrap; gap:
10px; } .skill { background: #e9e2ff; color: #5433b4; padding: 6px 13px; border-radius: 20px; } </style>
```

Appendix A. Source Code (HTML Body Part)

```
      <body> <header> <div class="logo"> </> Pranathi</div> <button class="menu-btn"
onclick="toggleMenu()">☰</button> <nav id="navigation"> <a href="#home">Home</a> <a href="#profile">Profile</a>
