UTSAV 2026

ANNUAL COLLEGE FESTIVAL WEB DEVELOPMENT PROJECT REPORT

Project Name	Utsav 2026 College Fest Website
Technology	HTML5, CSS3, JavaScript
Project Type	Front-End Event Portal & Registration System
Purpose	Educational project showcasing festival events, schedule, rules, and participant registration

Prepared as a simple-English guide to the project, its interactive features, code architecture, and visible browser output.

1. Introduction

Utsav 2026 is a dynamic, responsive college festival web application designed to present technical challenges, cultural competitions, and hands-on workshops in an engaging digital format. It is crafted to welcome students, faculty, and visitors with an energetic layout. The website utilises HTML5 for structural organisation, CSS3 for striking color gradients, responsive grid alignment, and micro-interactions, and JavaScript for real-time event filtering and form feedback.

2. Project Objectives

- Create an appealing, celebratory digital homepage for an annual college festival.
- Display diverse event categories (Technical, Cultural, Workshops) with descriptions, timings, and coordinator details.
- Provide smooth interactive category filtering buttons powered by JavaScript.
- Organise festival timelines and venues cleanly in a structured timetable schedule.
- Detail event coordinators and safety rules in professional info boxes.
- Enable user registration through an interactive form with auto-event selection.

3. Technologies Used

HTML5: Defines the semantic structure of the website, including the top navigation bar, header banner, filter buttons, event article cards, schedule table, coordinator lists, rule items, registration form, and footer.

CSS3: Implements modern visual styling, custom font stacks, vibrant linear gradients (purple, pink, and orange banner background), CSS Grid layouts for event cards, Flexbox alignments, and media queries for mobile responsiveness.

JavaScript: Powers interactive functionality, including dynamic category filtering of event cards, automatic event selection when clicking "Register" on a card, smooth scrolling to the registration form, and simulated form submission alerts.

4. Website Sections Breakdown

Navigation Bar

The dark-purple header (`#211344`) features the festival brand title (`🎉 UTSAV 2026`) with gold-yellow accents, alongside anchor links for Home, Events, Schedule, Rules, and Register that enable smooth scrolling across the page.

Festival Banner

A prominent hero section featuring a multi-color gradient background (`linear-gradient(120deg, #6d28d9, #db2777, #f97316)`), festival subtitle tag, large heading, and a call-to-action button directing users to the registration section.

Event Cards & Category Filters

The event section provides filter buttons (All Events, Technical, Cultural, Workshops) that instantly show or hide corresponding event cards via JavaScript. Each event card features an emoji art header, category badge, event title, description, time, coordinator name, and a direct registration button.

Festival Schedule

A structured table presents the day's itinerary, mapping exact times (from 9:00 AM Inauguration to 3:00 PM Prize Distribution) to specific event titles and campus venues like the Main Auditorium and Computer Lab.

Coordinators, Rules & Registration

Dual grid info boxes list student event coordinators and important festival guidelines (ID cards, punctuality, original work). The registration form collects full name, email, college name, branch selection, event preference, and optional messages.

5. Important Code Concepts

CSS Grid & Flexbox: Used to arrange event cards into 3-column grids and align navigation and filter buttons.

Dataset Attributes: HTML `data-category` attributes allow JavaScript to filter cards efficiently.

6. Website Output Screenshot

The following screenshot represents the visual browser output of the Utsav 2026 festival website, showing the gradient banner, filter buttons, event cards, schedule table, and registration form.

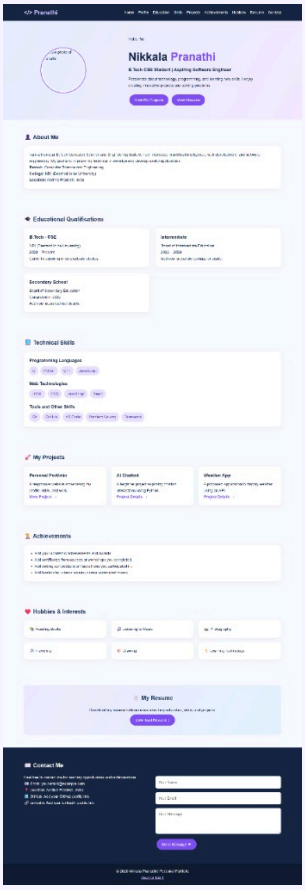

Figure 1. Utsav 2026 College Festival webpage rendered browser output.

7. How the Website Works

- The browser parses the HTML5 structure and loads embedded CSS styles for colors, grids, and gradients.
- JavaScript functions handle category filtering by evaluating `card.dataset.category` against user button clicks.
- Clicking "Register" on any event card triggers `selectEvent()`, which populates the event dropdown and smoothly scrolls to the form.
- Form submission captures user input, displays a confirmation status message, and resets the form.
- Responsive media queries adjust grid layouts to 2 columns on tablets and single column on mobile screens.

8. Observations and Future Enhancements

- The registration form currently provides demo feedback via JavaScript and can be connected to a backend database or Google Sheets API.
- Event times and coordinator names are sample placeholders and should be updated with final official schedules.
- Future enhancements could include payment gateway integration for paid workshops and QR code pass generation.

9. Conclusion

Utsav 2026 demonstrates how HTML5, CSS3, and JavaScript combine to create an interactive, visually stunning college festival portal. It successfully delivers event browsing, timetable scheduling, rule guidelines, and seamless registration.

10. Quick Viva Questions & Answers

Q: What is the primary purpose of Utsav 2026?
A: To serve as an interactive annual college fest portal for exploring events, checking schedules, and registering participants.

Q: Which web technologies are used in this project?
A: HTML5 for markup structure, CSS3 for styling and responsive layout, and JavaScript for event filtering and registration interaction.

Q: How does the category filter function work?
A: JavaScript queries all event cards, compares their data category with the selected button, and updates display styles accordingly.

Q: What happens when a user clicks register on an event card?
A: The registration form dropdown automatically selects that event and smoothly scrolls the viewport to the form.

Q: Does the registration form save data to a database?
A: No, it is a front-end demonstration form showing a confirmation message via JavaScript.

Appendix A. Source Code (HTML & CSS Part 1)

The snippet below shows the HTML head setup, color variables, navigation styling, and festival gradient banner styles.

```
<!DOCTYPE html> <html lang="en"> <head> <meta charset="UTF-8"> <meta name="viewport" content="width=device-width, initial-scale=1.0"> <title>Utsav 2026 | College Fest</title> <style> * { margin: 0; padding: 0; box-sizing: border-box; scroll-behavior: smooth; } body { font-family: Arial, sans-serif; background: #f5f3ff; color: #252044; line-height: 1.6; } nav { background: #211344; color: white; padding: 16px 6%; display: flex; justify-content: space-between; align-items: center; flex-wrap: wrap; gap: 12px; } nav h2 { color: #f9d66b; } nav a { color: white; text-decoration: none; margin: 8px; } nav a:hover { color: #f9d66b; } .banner { min-height: 380px; padding: 65px 20px; text-align: center; color: white; background: linear-gradient(120deg, #6d28d9, #db2777, #f97316); display: flex; flex-direction: column; align-items: center; justify-content: center; } </style> </head>
```

Appendix A. Source Code (CSS Part 2)

The snippet below details the event grid cards, schedule table styling, and registration form inputs.

```
<style> .event-grid { display: grid; grid-template-columns: repeat(3, minmax(0, 1fr)); gap: 22px; } .event-card { background: white; border-radius: 14px; overflow: hidden; box-shadow: 0 4px 15px #21134412; transition: transform 0.25s; } .event-card:hover { transform: translateY(-5px); } .event-art { padding: 25px; text-align: center; font-size: 58px; background: linear-gradient(135deg, #ede9fe, #fce7f3); } table { width: 100%; border-collapse: collapse; background: white; min-width: 500px; } th, td { border: 1px solid #e4ddf5; padding: 14px; text-align: left; } th { background: #6d28d9; color: white; } .registration { max-width: 650px; margin: auto; background: white; padding: 28px; border-radius: 15px; box-shadow: 0 4px 18px #21134415; } </style>
```

Appendix A. Source Code (JavaScript & HTML Body Part)

```
<body> <nav> <h2>🎉 UTSAV 2026</h2> <div> <a href="#home">Home</a> <a href="#events">Events</a> <a href="#schedule">Schedule</a> <a href="#rules">Rules</a> <a href="#register">Register</a> </div> </nav> <header class="banner" id="home"> <span class="tag">THE ANNUAL COLLEGE FEST</span> <h1>UTSAV 2026</h1> <p>Celebrate innovation, creativity, talent and friendship!</p> <a href="#register" class="btn">Register Now →</a> </header> <script> function filterEvents(category, button) { const cards = document.querySelectorAll(".event-card"); cards.forEach(function(card) { if (category === "all" || card.dataset.category === category) { card.style.display = "block"; } else { card.style.display = "none"; } }); document.querySelectorAll(".filters button").forEach(btn => btn.classList.remove("active")); button.classList.add("active"); } function selectEvent(eventName) { document.getElementById("event").value = eventName; document.getElementById("register").scrollIntoView({ behavior: "smooth" }); } document.getElementById("registrationForm").addEventListener("submit", function(event) { event.preventDefault(); const name = document.getElementById("name").value.trim(); document.getElementById("message").textContent = "Thank you, " + name + "! Registration submitted successfully."; this.reset(); }); </script> </body> </html>
```
